

All ERA-TAC mounting systems are produced to the

NATO-STANAG 4694 Standard

The use of heavy optics on large caliber weapons subjects the Picatinny-to-Mount contact areas to very high stresses during recoil.

The STANAG 4694 standard allows these stresses to be distributed over a significantly larger surface area than the MIL-STD-1913 standard allows.

**Typical US-MIL-STD-1913
Rail/Grabber Interface**

**NATO Rail/Grabber
Interface**

NATO-STANAG 4694 is fully backwards compatible with MIL-STD-1913.
